

“5G: The Most Censored Story Of 2018” – Journalist Masterfully Educates Houston City Council

By Arjun Walia | [Collective-Evolution](#)

In Brief

- The Facts: Derrick Broze, a journalist and activist recently presented to Houston about the new proposed 5G network. He points to multiple studies and scientists outlining serious health concerns for all.
- Reflect On: What can you do to mitigate this? There are solutions presented in the article but are you taking any? How can our regulatory agencies approve a technology that's so harmful to human biology? What is going on here?

The 5G network is new, and it's being accepted, approved and implemented already without any appropriate safety testing nor discussion with the public.

Recent research has revealed that the frequencies utilized in crowd control weapons are the same as the frequencies used in the 5G network, and there is absolutely no question about the fact that these electromagnetic frequencies impact our biology in multiple harmful ways. With more than [2000 peer-reviewed](#) studies on the subject, thousands of scientists raising multiple causes for concern, hundreds of scientists petitioning the United Nations, and absolutely no oversight, regulation or safety testing, how is it that this type of thing is legal and allowed to be approved?

Well, the 5G, and the entire global network of wireless technology is controlled by a few people and corporations. This highlights the relationship that western corporations have with government regulatory agencies. These corporations sit above the government, and through lobbying, corporations provide instructions to government regulatory agencies. Our regulatory health agencies are a cesspool of corruption as well, so much to the point where those who work within these agencies are actually starting to have a shift in consciousness and are speaking out. The problem has become so big and widespread that they cannot remain silent. [The SPIDER papers](#) from multiple CDC scientists was an excellent example, outlining the grave concern about the CDC's relationship with corporations and the stranglehold these corporations have over them.

[Multiple countries around the world have banned WiFi](#) and the building of cell phone towers near primary schools and nurseries, among many other places due to the evidence that shows they are not safe and can implicate the health of young children and adults.

Dr. Devra Lee Davis, founding director of the board on

Environmental Studies and Toxicology of the U.S. National Research Council, National Academy of Sciences, founding director of the Center for Environmental Oncology, University of Pittsburgh Cancer Institute, and President of the Environmental Health Trust [stated](#):

“If you are one of the millions who seek faster downloads of movies, games and virtual pornography, a solution is at hand, that is, if you do not mind volunteering your living body in a giant uncontrolled experiment on the human population. At this moment, residents of the Washington, DC region – like those of 100 Chinese cities – are about to be living within a vast experimental Millimeter wave network to which they have not consented – all courtesy of American taxpayers,”

Journalist Presents to Houston City Council

That’s why the video below is so important, it’s a video of Derrick Broze, founder of the [Conscious Resistance](#) network. Not only are scientists speaking out about this issue, and continuing to publish eye-opening research, much of which can be found at [The Environmental Health Trust](#), but citizens and activists are getting involved too.

The speech below takes place at a hearing in Houston. This, like so many other health issues we are facing, is important to raise awareness about together. The more people speaking up and creating awareness, the more chances we have of that this awareness leads to action or at the very least, a deep realization by council members that they are being bullied by corporations, much like we’re seeing in France.
