

# The Plan Is Unfolding for How Vaccines Will Be Monitored

By [Dr. Joseph Mercola](#) | [mercola.com](http://mercola.com)

## STORY AT-A-GLANCE

- Operation Warp Speed (OWS), a joint operation between the U.S. Health and Human Services (HHS) and the Department of Defense, continues to be shrouded in secrecy
- OWS is a public-private partnership tasked with producing therapeutics and a fast-tracked COVID-19 vaccine – 300 million doses' worth that is intended to be made available starting in January 2021
- OWS has plans to engage an “active pharmacovigilance surveillance system” to track Americans for 24 months

following vaccination

- One of OWS' four key tenets is "traceability," which includes confirming which of the approved vaccines were administered regardless of location (public or private), reminding recipients to return for a second dose, and ensuring that the correct second dose is administered
- Google and Oracle, a multinational computer technology corporation headquartered in California, in the heart of Silicon Valley, have been contracted to "collect and track vaccine data" as part of OWS' surveillance systems
- OWS, rather than being directed by public health officials, is heavily dominated by the military, technology companies, and U.S. intelligence agencies, likening it to a successor for Total Information Awareness (TIA), a program that sprang up after the 9/11 attacks but was quickly defunded following public backlash over privacy concerns

Operation Warp Speed (OWS), a joint operation between the U.S. Health and Human Services (HHS) and the Department of Defense, continue to be shrouded in secrecy, but little by little information is emerging that long-term monitoring of the U.S. public is part of the plan.

At face value, OWS is a public-private partnership tasked with producing therapeutics and a fast-tracked COVID-19 vaccine<sup>1</sup> – 300 million doses' worth that is intended to be made available starting in January 2021.<sup>2</sup>

But it appears the involvement doesn't end there. Rather than just ensuring a vaccine is produced and made available for those who want it, Moncef Slaoui, the chief scientific adviser for Operation Warp Speed, dubbed the coronavirus vaccine czar,<sup>3</sup> said in an interview with The Wall Street Journal that the rollout will include "incredibly precise ... tracking systems."<sup>4,5</sup>

Their purpose? “To ensure that patients each get two doses of the same vaccine and to monitor them for adverse health effects.”<sup>6</sup> In an interview with The New York Times, Slaoui described it as a “very active pharmacovigilance surveillance system.”<sup>7</sup>

## **What Will the Vaccine Monitoring System Entail?**

This is the No. 1 question and one that hasn’t been answered, at least not officially. “While Slaoui himself was short on specifics regarding this ‘pharmacovigilance surveillance system,’” news outlet Humans Are Free reported, “the few official documents from OWS that have been publicly released offer some details about what this system may look like and how long it is expected to ‘track’ the vital signs and whereabouts of Americans who receive a Warp Speed vaccine.”<sup>8</sup>

One of the documents, titled “From the Factory to the Frontlines: The Operation Warp Speed Strategy for Distributing a COVID-19 Vaccine,” was released by HHS.<sup>9</sup> It also mentions the use of pharmacovigilance surveillance along with Phase 4 (post-licensure) clinical trials in order to assess the vaccines’ long-term safety, since “some technologies have limited previous data on safety in humans.”<sup>10</sup>

The report, which lays out a strategy for distributing a COVID-19 vaccine, from allocation and distribution to administration and more, continues:<sup>11</sup>

*“The key objective of pharmacovigilance is to determine each vaccine’s performance in real-life scenarios, to study efficacy, and to discover any infrequent and rare side effects not identified in clinical trials. OWS will also use pharmacovigilance analytics, which serves as one of the*

*instruments for the continuous monitoring of pharmacovigilance data.*

*Robust analytical tools will be used to leverage large amounts of data and the benefits of using such data across the value chain, including regulatory obligations. Pharmacovigilance provides timely information about the safety of each vaccine to patients, healthcare professionals, and the public, contributing to the protection of patients and the promotion of public health.”*

Similar language was reiterated in an October 2020 perspective article published in The New England Journal of Medicine (NEJM), written by Slaoui and Dr. Matthew Hepburn.<sup>12</sup>

Hepburn is a former program manager for the U.S. Defense Advanced Research Projects Agency (DARPA), where he oversaw the development of [ProfusA](#),<sup>13</sup> an implantable biosensor that allows a person’s physiology to be examined at a distance via smartphone connectivity. ProfusA is also backed by [Google](#), the largest data mining company in the world.

Writing in NEJM, the duo writes, “Because some technologies have limited previous data on safety in humans, the long-term safety of these vaccines will be carefully assessed using pharmacovigilance surveillance strategies.”<sup>14</sup>

## **‘Traceability’ a Key Tenet of Operation Warp Speed**

Humans Are Free also references an OWS infographic,<sup>15</sup> which details the COVID-19 vaccine distribution and administration process. One of the four key tenets is “traceability,” which includes confirming which of the approved vaccines were administered regardless of location (public or private),

reminding recipients to return for a second dose, and ensuring that the correct second dose is administered.

That word – pharmacovigilance – is used again, this time as a heading inferring that the U.S. Food and Drug Administration and the U.S. Centers for Disease Control and Prevention will be involved in “24-month post-trial monitoring for adverse effects/additional safety feature.” Pharmacovigilance, also known as drug safety, generally refers to the collection, analysis, monitoring, and prevention of adverse effects from medications and other therapies.<sup>16</sup>

Passive reporting systems for adverse events, like the Vaccines Adverse Event Reporting System, already exist and are managed by the FDA and CDC.

However, a report released by Johns Hopkins Bloomberg School of Public Health, Center for Health Security suggests that passive systems that rely on people to send in their experiences should be made into an “active safety surveillance system directed by the CDC that monitors all vaccine recipients – perhaps by short message service or other electronic mechanisms – with criteria based on the World Health Organization Global Vaccine Safety Initiative.”<sup>17,18</sup>

What’s more, according to Humans Are Free, “Despite the claims in these documents that the ‘pharmacovigilance surveillance system’ would intimately involve the FDA, top FDA officials stated in September that they were barred from attending OWS meetings and told reporters they could not explain the operation’s organization or when or with what frequency its leadership meets.”<sup>19</sup> STAT News further reported:<sup>20</sup>

*“The Food and Drug Administration, which is playing a critical role in the response to the pandemic, has virtually no visibility into OWS – but that’s by design ... The FDA has set up a firewall between the vast majority of staff and the*

*initiative to separate any regulatory decisions from policy or budgetary decisions.*

*FDA officials are still allowed to interact with companies developing products for OWS, but they're barred from sitting in on discussions regarding other focuses of OWS, like procurement, investment or distribution."*

Johns Hopkins Bloomberg School of Public Health, Center for Health Security, by the way, has ties to [Event 201](#), a pandemic preparedness simulation for a "novel coronavirus" that took place in October 2019, along with [Dark Winter](#), another simulation that took place in June 2001, which predicted major aspects of the subsequent 2001 anthrax attacks.

Hepburn also reportedly "ruffled feathers" during a June 2020 presentation to the CDC's Advisory Committee on Immunization Practices because he offered no data-rich slides, which are typically part of such presentations, and, STAT News reported, "Several members asked Hepburn pointed questions he pointedly did not answer."<sup>21</sup>

## **Google and Oracle Contracted to Collect Vaccine Data**

Google and Oracle, a multinational computer technology corporation headquartered in California, in the heart of Silicon Valley, have been contracted to "collect and track vaccine data" as part of OWS' surveillance systems,<sup>22</sup> a partnership Slaoui reportedly revealed in his Wall Street Journal interview.<sup>23</sup> According to Humans Are Free:<sup>24</sup>

*"If the Warp Speed contracts that have been awarded to Google and Oracle are anything like the Warp Speed contracts awarded to most of its participating vaccine companies, then those*

*contracts grant those companies diminished federal oversight and exemptions from federal laws and regulations designed to protect taxpayer interests in the pursuit of the work stipulated in the contract.*

*It also makes them essentially immune to Freedom of Information Act requests. Yet, in contrast to the unacknowledged Google and Oracle contracts, vaccine companies have publicly disclosed that they received OWS contracts, just not the terms or details of those contracts. This suggests that the Google and Oracle contracts are even more secretive.”*

In an interview with investigative journalist Whitney Webb (see Mercola hyperlink above under “Dark Winter”), it’s also revealed that Slaoui, a long-time head of GlaxoSmithKline’s vaccine division, is a leading proponent of bioelectronic medicine, which is the use of injectable or implantable technology for the purpose of treating nerve conditions.

The MIT Technology Review has referred to it as hacking the nervous system. But it also allows you to monitor the physiology of the human body from the inside.

Slaoui is also invested in a company called Galvani Bioelectronics, which was co-founded by a Google subsidiary. “So, you have Google being contracted to monitor this pharmacovigilance surveillance system that aims to monitor the physiology and the human body for two years,” Webb says.

“And then you have the ties to the Profusa project,” she adds, “which oddly enough is supposed to work inside the human body for 24 months – the exact window they’ve said will be used to monitor people after the first [vaccine] dose.”

The conflict of interest is massive, in part because [Google owns YouTube](#), which has been banning our videos, a majority of

which are interviews with health experts sharing their medical or scientific expertise and viewpoints on COVID-19, since June 2020. As noted by Humans Are Free:<sup>25</sup>

*“With Google now formally part of OWS, it seems likely that any concerns about OWS’s extreme secrecy and the conflicts of interest of many of its members (particularly Moncef Slaoui and Matt Hepburn) as well as any concerns about Warp Speed vaccine safety, allocation and/or distribution may be labeled ‘COVID-19 vaccine misinformation’ and removed from YouTube.”*

## **Is Total Surveillance Set to Become the New Normal?**

OWS, rather than being directed by public health officials, is heavily dominated by the military, technology companies, and U.S. intelligence agencies, likening it to a successor for Total Information Awareness (TIA), a program managed by DARPA that sprang up after the 9/11 attacks.

At the time, TIA was seeking to collect Americans’ medical records, fingerprints, and other biometric data, along with DNA and records relating to personal finances, travel, and media consumption.<sup>26</sup> According to Webb (again, refer to the Mercola hyperlink earlier, “Dark Winter”):

*“We now know, for example, that the NSA and the Department of Homeland Security are directly involved in Operation Warp Speed, but they won’t really say exactly what parts they’re doing. But there are some indications as to what they could be involved with.*

*And the fact that Silicon Valley companies that have been known to collaborate with intelligence [agencies] for the purpose of spying on innocent Americans – Google and Oracle,*

*for example – are going to be involved in this surveillance system ... for everyone that gets the vaccine.*

*It's certainly alarming, and it seems to point to the fulfillment of an agenda that was attempted to be pushed through or foisted on the American public after 9/11, called Total Information Awareness, which was managed, originally, by DARPA.*

*It was about using medical data and non-medical data – essentially all data about you – to prevent terror attacks before they could happen, and also to prevent bioterror attacks and even prevent naturally occurring disease outbreaks.*

*A lot of the same initiatives proposed under that original program after 9/11 have essentially been resurrected, with updated technology, under the guise of combating COVID-19.”*

A key difference is that TIA was quickly defunded by Congress after significant public backlash, including concerns that TIA would undermine personal privacy. In the case of OWS, there is little negative press, and media outlets are overwhelmingly supportive of the operation as a way to resolve the COVID-19 crisis.

But what if it's not actually about COVID-19 at all, but represents something bigger, something that's been in the works for decades? As Humans Are Free puts it:<sup>27</sup>

*“The total-surveillance agenda that began with TIA and that has been resurrected through Warp Speed predated COVID-19 by decades.*

*Its architects and proponents have worked to justify these*

*extreme and invasive surveillance programs by marketing this agenda as the 'solution' to whatever Americans are most afraid of at any given time. It has very little to do with 'public health' and everything to do with total control."*

## **One of the Most Powerful Videos I've Ever Seen**

The following video from Barbara Loe Fisher is one of the most powerful videos that I have ever seen. I am hopeful that watching this video will inspire you to take up the cause and join the fight for vaccine freedom and independence.

There are a cultural war and collusion between many industries and federal regulatory agencies that result in a suppression of the truth about vital important health issues. If this suppression continues we will gradually and progressively erode our private individual rights that our ancestors fought so hard to achieve. Please take a few minutes to watch this video.

## **Protect Your Right to Informed Consent and Defend Vaccine Exemptions**

With all the uncertainty surrounding the safety and efficacy of vaccines, it's critical to protect your right to make independent health choices and exercise voluntary informed consent to vaccination. It is urgent that everyone in America stand up and fight to protect and expand vaccine informed consent protections in-state public health and employment laws. The best way to do this is to get personally involved with your state legislators and educate the leaders in your community.

# Think Globally, Act Locally

National vaccine policy recommendations are made at the federal level but vaccine laws are made at the state level. It is at the state level where your action to protect your vaccine choice rights can have the greatest impact.

It is critical for EVERYONE to get involved now in standing up for the legal right to make voluntary vaccine choices in America because those choices are being threatened by lobbyists representing drug companies, medical trade associations, and public health officials, who are trying to persuade legislators to strip all vaccine exemptions from public health laws.

Signing up for NVIC's free Advocacy Portal at [www.NVICAdvocacy.org](http://www.NVICAdvocacy.org) gives you immediate, easy access to your own state legislators on your smartphone or computer so you can make your voice heard. You will be kept up to date on the latest state bills threatening your vaccine choice rights and will get practical, useful information to help you become an effective vaccine choice advocate in your own community.

Also, when national vaccine issues come up, you will have the up-to-date information and call-to-action items you need at your fingertips. So, please, as your first step, sign up for the NVIC Advocacy Portal.

## Share Your Story With the Media and People You Know

If you or a family member has suffered a serious vaccine reaction, injury, or death, please talk about it. If we don't share information and experiences with one another, everybody feels alone and afraid to speak up. Write a letter to the editor if you have a different perspective on a vaccine story that appears in your local newspaper. Make a call into a radio

talk show that is presenting only one side of the vaccine story.

I must be frank with you: You have to be brave because you might be strongly criticized for daring to talk about the “other side” of the vaccine story. Be prepared for it and have the courage to not back down. Only by sharing our perspective and what we know to be true about vaccination will the public conversation about vaccination open up so people are not afraid to talk about it.

We cannot allow the drug companies and medical trade associations funded by drug companies or public health officials promoting forced use of a growing list of vaccines to dominate the conversation about vaccination.

The vaccine injured cannot be swept under the carpet and treated like nothing more than “statistically acceptable collateral damage” of national one-size-fits-all mandatory vaccination policies that put way too many people at risk for injury and death. We shouldn’t be treating people like guinea pigs instead of human beings.

## **Internet Resources Where You Can Learn More**

I encourage you to visit the website of the nonprofit charity, the National Vaccine Information Center (NVIC), at [www.NVIC.org](http://www.NVIC.org):

- [Vaccine Requirements and Exemptions by State](#) – Vaccine laws vary from one U.S. state to another. By knowing the specific policies where you live, you’ll learn how you can get exemptions and better protect your right to make informed vaccine choices.
- [NVIC Memorial for Vaccine Victims](#) – View descriptions and photos of children and adults who have suffered

vaccine reactions, injuries, and deaths. If you or your child experiences an adverse vaccine event, please consider posting and sharing your story here.

- [\*\*If You Vaccinate, Ask 8 Questions\*\*](#) – Learn how to recognize vaccine reaction symptoms and prevent vaccine injuries.
- [\*\*Vaccine Freedom Wall\*\*](#) – View or post descriptions of harassment and sanctions by doctors, employers, and school and health officials for making independent vaccine choices.
- [\*\*Vaccine Failure Wall\*\*](#) – View or post descriptions about vaccines that have failed to work and protect the vaccinated from disease.
