

# **Gregg Braden: Your Heart Contains Something Incredible (Powerful Discovery)**

Gregg Braden shares a discovery about the incredible powers of the human heart. In 1991, a scientist discovered that we have within our hearts about 40,000 specialized cells concentrated in a very precise way. The specialized cells are called sensory neurites. It means they're essentially brain-like cells, but they're not in our brain – they're in our heart.
