

Cymatics Insights: Sound into Form

When “Om,” the Hindu primordial sound of creation, is intoned into a tonoscope it forms in the substance the Sri Yantra, the visual representation of the Om chant and the vibration behind the cosmos itself[[iii](#)], the “sound” of the aetheric medium or “fabric” of space. Thus we see that the Hindus knew thousands of years ago that sound possessed geometry, or sound into form is a fundamental truth of reality. The Om chant itself is one for expanding consciousness by developing resonance with the cosmos. (Remember, too, that sound waves exist in three dimensions!)
