

Coronavirus – A Novel Perspective with Proof

By Sharry Edwards | [Sound Health Options](#)

Image Credit: Natural Society

Editor's Note: The head of the National Institutes of Allergy and Infectious Disease, Michael Fauci, is a man who has served as an advisor to six presidents, including Donald Trump. He predicts that the process to find an appropriate vaccine, which is hoped to address the Corona Virus, will take about a year and a half to become available. This is necessary to test any candidate vaccine for safety and efficacy. "A coronavirus vaccine will take at least 18 months—if it works at all"

Mr. Fauci even suggested that large gatherings be cancelled in his March 11, 2020 testimony presented to the House Committee on Oversight and Government Reform. President Trump stated, in a March 9, 2020 tweet, that "Nothing is shut down, life & the economy go on." "NIH official suggests large gatherings

should be canceled due to coronavirus outbreak”

Shutting down large gatherings would indeed present our country with a tremendous loss of personal freedom and business revenues. Imagine seeing loving couples cancelling their weddings for 18 months, or sports fans not seeing their favorite teams live for a year and a half. Besides, this kind of restriction did not happen with Swine Flu or SARS, et al. This all begs the question: Can we prepare for the worst, and hope for the best, while still allowing our lives to go on?

The following article, from my teacher, Sharry Edwards, the Pioneer of Human BioAcoustics, gives us some hope, and practical information with which to support our bodies' innate capacity to heal and maintain an optimum form and function in the face of this epidemic. This kind of information should help us all to remain sane and maintain our common sense, during this difficult time. Besides, panic does no one any good.

Evidence provides countervailing options to this Virus that can help define infection and potential cure. This paper reveals the steps that were taken to reveal the math-based formulations of the root cause and break-up of flu based pathogens.

According to the media and world governments, a China based pandemic is upon us: the Coronavirus plague. The internet, newspapers and TV commentators have reported that millions will die. Using such scare tactics without providing any ameliorating tools or solutions is unethical, in my opinion. Positing that only the government can save the people is tantamount to tyranny. If there is a way to combat such a scourge, it ought to be made public.

Such is the topic of this article, that I hope will reach the World Health Organization and be used under the Unproven Intervention consensus. Link:

<https://www.who.int/mediacentre/news/statements/2014/ebola-ethical-review-summary/en/>

In the particular circumstances of this outbreak, and provided certain conditions are met, the panel reached consensus that it is ethical to offer unproven interventions with as yet unknown efficacy and adverse effects, as potential treatment or prevention.

BACKGROUND: In 1996, Nexus Magazine published a paper from the Institute of BioAcoustic Biology & Sound Health reporting the outcomes of a project they conducted substantiating that frequency-based antidotes could combat resistant pathogens. If the process worked, it was speculated, SUPER BUGS could not remain a threat.

The article concluded: **A variety of disease-causing pathogens and health problems can be identified and cancelled-out by the input of complementary frequencies and harmonics.** See Exhibit 1.

In that article, titled “Decloaking Resistant Pathogens”, it was described that dark field microscopy of the blood was used to show that sound frequencies could break-away the “cloak” that pathogens use to actually “go stealth” within the body.

The low frequency sounds that were presented to the blood specimen did not kill the pathogens but rather removed the self-created, protein barriers that had been created by the invading pathogen. This allowed that the body’s own “killer cells” to respond to the assault. The Nexus article included screen shots from the video of the actual decloaking and the body’s attack of the pathogens. See Exhibit 2. Article Link: <http://cruinthe.tripod.com/nexus/articles/decloakingpathogens.html> and https://www.bibliotecapleyades.net/salud/esp_salud03.htm

Over the years, Sound Health used the same protocols to provide countervailing frequencies to the public for flu

related issues. Listings of frequency-based antidotes for many flu varieties, fevers, anti-biotic resistant pneumonias, Epstein Barr, additional invading threats... were provided for public use. See Exhibit 3 .

A few years ago, BioAcoustic personnel noticed a change in the mathematical patterns of the recommended flu vaccines that we had created. The numbers were too perfect. They did not match nature's germs and pathogens matrixes that had been previously created. The genes and protein antidotes were in conflict with each other and it was concluded that these frequency combinations were man-made. Nature-made pathogens have antidotes that are not harmonic. These current Coronavirus frequency antidotes show to be numerically harmonic; indicating probable human interference in their creation.

The virus' BioAcoustic math pattern competed with the actual math correlates that has been targeted by conventional medicine to be a part of the healing process for this type of pathogen.

The Institute for BioAcoustic Biology has not tested anyone reported to be infected with the Coronavirus. The following information concerning the frequencies associated with the present threat are being reported based on extrapolation of previous data.

The Frequency Equivalents*™ for the Coronavirus overwhelmingly correspond to the body's use of many aspects and variabilities of Glutathione, second only to Quercetin. Both show strong relationships with the immune system. The information below is for information purposes but shows definitive negative outcomes if not available to the body. See specific info on both below:

Sources: ONLINE

Glutathione (GSH), an amino acid, is an antioxidant in plants, animals, fungi, and some bacteria and archaea. **Glutathione** is capable of preventing damage to important cellular components caused by reactive oxygen species such as free radicals, peroxides, lipid peroxides, and heavy metals.

Glutathione is involved in the **detoxification** of both xenobiotic and endogenous compounds. It facilitates excretion from cells (Hg), facilitates excretion from body (POPs, Hg) and directly neutralizes (POPs, many oxidative chemicals).

<https://www.cambridge.org/core/journals/proceedings-of-the-nutrition-society/article/glutathione-and-immune-function/39488A395CB25E88283204A938A4CBD9>

The immune system works best if the lymphoid cells have a delicately balanced intermediate level of glutathione. Even moderate changes in the intracellular glutathione level have profound effects on lymphocyte functions. Certain functions, such as the DNA synthetic response, are exquisitely sensitive to reactive oxygen intermediates and, therefore, are favored by high levels of the antioxidant glutathione. Certain signal pathways, in contrast, are enhanced by oxidative conditions and favored by low intracellular glutathione levels. The available evidence suggests that the lymphocytes from healthy human subjects have, on average, an optimal glutathione level. There is no indication that immunological functions such as resistance to infection or the response to vaccination may be enhanced in healthy human subjects by administration of glutathione or its precursor amino acid cysteine. However, immunological functions in diseases that are associated with a cysteine and glutathione deficiency may be significantly enhanced and potentially restored by cysteine

supplementation. This factor has been studied most extensively in the case of human immunodeficiency virus (HIV)-infected patients who were found to experience, on average, a massive loss of S equivalent to a net loss of approximately 4 g cysteine/d. Two randomized placebo-controlled trials have shown that treatment of HIV-infected patients with N-acetyl-cysteine caused in both cases a significant increase in all immunological functions under test, including an almost complete restoration of natural killer cell activity. It remains to be tested whether cysteine supplementation may be useful also in other diseases and conditions that are associated with a low mean plasma cystine level and impaired immunological functions. <https://www.ncbi.nlm.nih.gov/pmc/articles/PMC3628138/>

Recent evidence shows that subjects diagnosed with an autism spectrum disorder (ASD) have significantly lower levels of glutathione than typically developing children. The purpose of this study was to examine the use of two commonly used glutathione supplements in subjects diagnosed with an ASD to determine their efficacy in increasing blood glutathione levels in subjects.

There are a handful of **foods** that naturally contain **glutathione**, including asparagus, avocado, cabbage, Brussels sprouts, spinach, broccoli, garlic, chives, tomatoes, cucumber, almonds, and walnuts. However, a variety of factors can affect the levels of this vital nutrient, including storage and cooking.

Biochemical function from Wikipedia

Glutathione exists in reduced (GSH) and oxidized ([GSSG](#)) states. The ratio of reduced glutathione to oxidized glutathione within cells is a measure of cellular [oxidative stress](#).^{[9][10]} In healthy cells and tissue, more than 90% of the total glutathione pool is in the reduced form (GSH), with the remainder in the disulfide form (GSSG). An

increased GSSG-to-GSH ratio is indicative of [oxidative stress](#).

In the reduced state, the thiol group of cysteinyl residue is a source of one [reducing equivalent](#). [Glutathione disulfide](#) (GSSG) is thereby generated. The oxidized state is converted to the reduced state by [NADPH](#). This conversion is catalyzed by [glutathione reductase](#):

The immune system works best if the lymphoid cells have a delicately balanced intermediate level of glutathione. <https://www.ncbi.nlm.nih.gov/pubmed/11115795>

With **Quercetin** being a powerful flavonoid, there is a wide range of health **benefits**, including its ability to reduce inflammation, eliminate pain, protect against cardiovascular diseases, act as an anti-cancer, boost the immune system, reduce histamines, and decrease irritation of the skin.

Research suggests that adding **quercetin** to the diet may help to relieve allergy symptoms. Research reports that **quercetin** can have anti-allergic and **antihistamine** properties. ... **Quercetin** is naturally present in many foods and herbs, including: apples. Oct 8, 2018

Quercetin is the **most** abundant flavonoid in the **diet**. It's estimated that the average person consumes 10–100 mg of it

daily through various **food** sources. **Foods** that commonly contain **quercetin** include onions, apples, grapes, berries, broccoli, citrus fruits, cherries, tea, and capers. Jun 27, 2019

The Flavonoid Quercetin Inhibits Proinflammatory Cytokine (Tumor Necrosis Factor Alpha) Gene Expression in Normal Peripheral Blood Mononuclear Cells via Modulation of the NF- κ B System

The flavonoids comprise a large class of low-molecular-weight plant metabolites ubiquitously distributed in food plants. These dietary antioxidants exert significant antitumor, antiallergic, and anti-inflammatory effects. The molecular mechanisms of their biological effects remain to be clearly understood. We investigated the anti-inflammatory potentials of a safe, common dietary flavonoid component, quercetin, for its ability to modulate the production and gene expression of the proinflammatory cytokine tumor necrosis factor alpha (TNF- α) by human peripheral blood mononuclear cells (PBMC). Our results showed that quercetin significantly inhibited TNF- α production and gene expression in a dose-dependent manner. Our results provide direct evidence of the anti-inflammatory effects of quercetin by PBMC, which are mediated by the inhibition of the proinflammatory cytokine TNF- α via modulation of NF- κ B1 and I κ B. American Society for Microbiology

These two immune supporting nutrients can be found in common foods and at your local health food store. The many deviations of nutritional glutathione support might point to

the need for Reduced Glutathione. Coronavirus seems to be presenting these Superbugs as well as suppressing the immune system concurrently.

Additional Frequency Equivalents associated with the Coronavirus include:

- Inhibitor of T-cell activation
- Ovulation regulation
- Carbon monoxide
- Several 911 toxins
- Pituitary Gene and stem Cells
- Hemolysis gene deficiency
- A component of fuel products
- Mitochondrial enzyme's, ATP, carbon Disulfide
- Iron regulation
- Nagalase
- Arachidonic Acid
- Eye Proteins
- Cholesterol metabolism
- Several vertebrae, C-4 and S-4
- Histamine
- Choline
- Stress Response gene

It has been reported on a recent podcast that this virus is actually pneumonic plague. The BioAcoustic Frequencies don't

match with pneumonic but are closely associated with Influenza B. See Exhibit 3 for pneumonic information.

Other on line suggestions: Enhancing the Ph of the body using sodium bicarbonate, magnesium chloride, selenium and iodine all of which can be applied at high dosages to head viruses off at the pass before they take hold and choke a person to death. All of these medicines can be administered at home safely and legally and one does not need a prescription because they are nutritional in nature, not pharmaceutical.

Epilogue

BioAcoustic Biology uses a three-prong approach to pathogen invasion. Identification, Formulation and Sound Presentation. This author wishes to provide a public online Sound Health WorkStation for people who want to evaluate themselves for the nutrients mathematically associated with the Coronavirus – SoundHealthPortal.com – CAMPAIGNS.

The opportunity is offered to the public free of charge and will provide a computerized report as to each individual's Corona Conflicts based on the Institute's decades of inquiry combined with current findings.

We previously posted our findings in terms of Rife Frequencies but there is much more to the story. Rife devices usually provide one frequency channel to the listener and the sounds are usually within vocal range. Pathogens respond negatively to digital sounds.

We use a multi-channeled device, a programmable, Square 2 ToneBox, that delivers two frequencies simultaneously designed to entrain the brain to deliver the sounds to the appropriate body system.

Think of your brain as you central processing unit that sends and receives signals for all parts of the body. We strive to

provide frequencies that support normal form & function. The data is overwhelming supportive of the idea that the voice is a holographic representation of all that you are. We have simply provided the clues as to what each frequency represents.

More people have Rife devices; hence we provided Rife-like formulations for public display. But BioAcoustic sound presentation takes into consideration many different formulations depending what system and what issues are being addressed for a client.

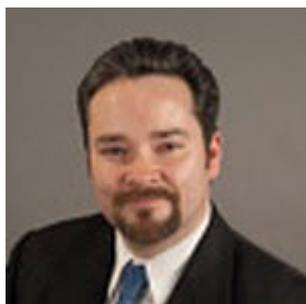

In 2004, the institute published this tenet: People with similar diseases, maladies, syndromes, traumas... have similar, if not identical vocal anomalies.

Since then many prestigious organizations, like MIT and the Mayo Clinic are now using vocal anomalies in search of a basis for frequency-based medicine.

Estimates now are that the field is worth many billions and a considerable boon to SELF-HEALTH.

Each frequency that is found to be anomalous (out-of-coherence) with the rest of the body's math can be used to support health & wellness. The Institute doesn't not have all of the answers but we have enough to know that Math as Medicine is an upcoming reality.
