

Frontal Lobe: Center of Conscience and Creativity (Joe Dispenza video)

Source: [HayHousePresents](#)

The crowning achievement of the human brain is the frontal lobe – the seat of our conscience and our creative center. Envisioning your clear intention with heightened emotion can define your new destiny. Is it possible to heal by thought alone—without drugs or surgery? The truth is that it happens more often than you might expect. In [You Are the Placebo](#), Dr. Joe Dispenza shares numerous documented cases of those who reversed cancer, heart disease, depression, crippling arthritis, and even the tremors of Parkinson's disease by believing in a placebo. Similarly, Dr. Joe tells of how others have gotten sick and even died the victims of a hex or voodoo curse—or after being misdiagnosed with a fatal illness. Belief can be so strong that pharmaceutical companies use double- and triple-blind randomized studies to try to exclude the power of the mind over the body when evaluating new drugs.
