Scientists are finding that beavers' small-scale natural interventions are valuable. In dry areas, beaver ponds restore moisture to the soil; in wet zones, their dams and ponds can help to slow floodwaters. These ecological services are so useful that land managers are translocating beavers in the U.S. and the United Kingdom to help restore ecosystems and make them more resilient to climate change. #beavers #beaverdam #waterresources

Here healing is experienced and here lies the "work" to be done. The allowing of a calm mind, free from endless chatter and mind numbing noise. It is only complicated if you decide it to be so. Any obstacle that we own, will continue to grow as we give credence to it. This is a universal law. What we give our attention to grows, whether it be wanted or unwanted. Whatever we resist, persists. So live in the state of being that allows flow, ease and intend to be healthy.

Tsunamis are created by an entirely different mechanism than normal waves. When an underwater earthquake, volcanic eruption, or landslide displaces a large amount of water, that energy has to go somewhere – so it generates a series of waves. Unlike wind-driven waves where the energy is confined to the upper layer of the ocean, the energy in a series of tsunami waves extends throughout the entire depth of the ocean. #tsunami
