

Synchronicity – Why and How Does it Happen? | Tom Campbell

Source: By [Tom Campbell](#) | [Tom Campbell YouTube Channel](#)

In this video by Tom Campbell, he talks about the concept of synchronicity, particularly in the context of the Larger Consciousness System (LCS). Campbell explores how and why synchronicities occur and how they interact with our consciousness. He outlines several key points during this discourse:

- 1. Increased Awareness:** Campbell posits that increased awareness of synchronicity may be due to an increased receptiveness to such occurrences. This heightened awareness could be a result of one's continued growth and openness to the existence of synchronicity, allowing the individual to notice and appreciate such events rather than letting them pass unnoticed.
- 2. Larger Consciousness System (LCS):** According to Campbell, synchronicity is a product of the LCS working to support the individual's growth and success. The LCS provides first-hand experiences of synchronicities to affirm the existence of a reality beyond the material world and to demonstrate the presence of deeper forces at play.
- 3. Probability and Nudging:** Campbell proposes that the LCS can influence events in one's life through 'nudging' or subtle prompting towards certain actions. By anticipating future probabilities, the LCS can guide an individual to perform actions that may seem unrelated at the time but prove beneficial in the future. For instance, ordering a specific car part ahead of time,

which coincidentally proves essential later on.

4. **Synchronicity as a Tool for Growth:** Campbell asserts that the LCS aims to assist individual growth by providing experiences that reveal a broader picture of reality. By manipulating the randomness inherent in any event's multiple possibilities, the LCS can create outcomes that positively interact with the individual.
5. **Reciprocal Relationship:** The LCS works with individuals who are actively trying to grow and learn. In this reciprocal relationship, the individual's increased involvement with the LCS results in a greater frequency of synchronicities.
6. **Letting Go of Control:** Through the continued experience of synchronicities, individuals may learn to relinquish their desire for control. Recognizing that events naturally fall into place without intervention, one can learn to trust the process and focus on personal growth.
7. **Significance of Synchronicity:** The LCS isn't necessarily interested in minor everyday details, like saving money or ensuring timely arrivals. Instead, it's more concerned with providing experiences that affirm its existence and its partnership with the individual on their journey of growth. This understanding of the system's support can be empowering and reassuring.
8. **System's Motivation:** The LCS is motivated to assist individuals because their success also benefits the system. When an individual lowers their entropy (a state of disorder or randomness), the system's entropy is likewise reduced because the individual is a part of it. The ultimate goal of the LCS is to foster growth and success, and it supports individuals who are actively working towards these goals.

Overall, Campbell's explanation of synchronicity in this video provides a framework for understanding these coincidences as part of a larger consciousness system's efforts to guide personal growth and highlight the interconnectedness of all

things.
