

Mass Protests Can End Vaccine Passports

By [Dr. Joseph Mercola](#) | mercola.com

STORY AT-A-GLANCE

- Peaceful protests work. In the U.K., following massive protests against vaccine passports, the government may now scrap its plan for vaccine passports as a legal requirement for large events
- In the U.S., 14 states have enacted laws that ban vaccine passport requirements in order to prevent the creation of a two-tier society. Only two have implemented vaccine passport requirements for certain activities

- Vaccine passports or any other type of certification are part of a much larger plan to implement a global social credit system, which would rely on the interconnectivity of thousands of databases, which Oracle offered to do for the U.S. government in 2002, for free
- Oracle manages databases for COVID-19 cases, vaccine data and clinical trial data, the U.S. national security database and databases for the CIA, Navy Intelligence, Air Force Intelligence, and the National Security Agency, plus banking, and a host of commercial databases. Oracle Labs is also partnered with DARPA to create an interconnected supercomputer
- Ultimately, the vaccine passport will expand to include not just vaccination status but also other medical data, basic identification records, financial data, and just about anything else that can be digitized and tracked. The end goal is to end freedom as we know it, using a social credit system based on 24/7 electronic surveillance to ensure compliance

March 20, 2021, on the 1-year anniversary of the first COVID-19 lockdown, people in more than 40 countries took to the streets peacefully demonstrating against COVID-19 lies and tyrannical measures under the banner of “Worldwide Freedom Day.” While synchronized around the world that particular day, demonstrations are more or less ongoing in various areas.

Peaceful Protests Are Ending Vaccine Passport Requirements

In the U.K., Britons held a “Unite for Freedom” rally in London, Saturday, May 29, 2021, as seen in the short video clip above. According to ITV.com,¹ hundred no-vaccine-passport protesters surged into the Westfield shopping mall in London, while another large crowd gathered in Parliament Square.

They were reportedly cleared from the mall after about 20 minutes by police, but no one was injured or arrested in this particular instance.

As reported by Reuters² May 30, 2021, it now looks like the U.K. will be scrapping its plan for vaccine passports as a legal requirement for large events, although a government spokesman told Reuters that a final decision has yet to be made and that the COVID-19 vaccine certification review is still ongoing. Why the sudden change? Undoubtedly, it's because Britons have repeatedly taken to the streets in protest of the medical apartheid these passports create.

14 US States Have Banned Vaccine Passport Requirements

In the U.S., there's also good news. A number of states have enacted laws that ban vaccine passport requirements in order to prevent the creation of a two-tier society of those with the freedom to live as they please, and others whose lives would be restricted based on [vaccination status](#) alone.

As of May 28, 2021, the following 14 states have banned vaccine passports from being required:³ Alabama, Arizona, Arkansas, Florida, Georgia, Idaho, Indiana, Iowa, Montana, North Dakota, South Carolina, South Dakota, Texas, Wyoming.

Utah has issued a partial ban that applies to state government only. Only two states so far – Hawaii and New York – have actually implemented vaccine certification requirements for certain activities.

In Hawaii, only those with proof of vaccination are allowed to travel between counties without pretravel testing and quarantine restrictions, while New York requires you to be vaccinated or have a recent negative COVID-19 test to enter certain sports arenas and large performance venues.

Florida Fights to Make Cruise Lines Adhere to Law

In my home state of Florida, one of the best pro-freedom governors in the U.S., Ron DeSantis, is now fighting the cruise industry over its proposed vaccination passport requirement.⁴ The bill he signed into law May 3, 2021,⁵ prohibits state government from issuing vaccine passports and private businesses from requiring proof of vaccination status to enter or obtain services.

As such, cruise lines that do business in Florida and want to restrict travel to vaccinated-only are in violation of this new anti-medical apartheid law. As reported by NBC News:⁶

“The Centers for Disease Control and Prevention gave the go-ahead Wednesday to begin work toward restarting cruises for the first time in over a year after the massive ships became some of the first superspreader locations for the coronavirus ...”

To comply with CDC guidance ... several cruise liners want to require nearly everyone onboard to be fully vaccinated. But that could now be illegal in Florida, the center of the American cruise industry, under a law DeSantis signed ... that prohibits businesses from discriminating against unvaccinated customers.

‘In Florida, your personal choice regarding vaccinations will be protected, and no business or government entity will be able to deny you services based on your decision,’ DeSantis said of the law, which codified executive orders he had already issued.

The dispute may end up in court, as the cruise industry

argues that the state law doesn't apply to it thanks to federal rules. In the meantime, companies may decide to move ahead with plans to require vaccinations, even if it means racking up violations in Florida."

A Social Credit System Is the End Goal of Vaccine Passports

It's important to realize those vaccine passports or any other type of certification in and of themselves are not the end goal here. They're merely a part of a much larger plan to implement a social credit system, such as that already implemented in China. First, they'd be expanded to cover other required vaccinations.

Ultimately, the vaccine passport will expand to include not just vaccination status but also other medical data, basic identification records, financial data, and just about anything else that can be digitized and tracked. The end goal is to end freedom as we know it, using a social credit system to ensure compliance.

Booster shots against COVID-19 variants would logically come first, followed by any number of other vaccinations. The sky's the limit as far as that's concerned, and many are likely to be gene-based and therefore dangerous in the extreme. Already, vaccine makers have announced they're working on a combination COVID-flu/mRNA vaccine,⁷ a pneumococcal-COVID/mRNA booster shot for adults over 65,⁸ and mRNA/seasonal influenza vaccines.⁹

Ultimately, the vaccine passport will expand to include not just vaccination status but also other medical data, basic identification records, financial data, and just about anything else that can be digitized and tracked. It may even extend to include real-time biological data.

The end goal is to end freedom as we know it, using a social

credit system to ensure compliance. If you disobey or act “out of line” with a prevailing dictate, your freedom to travel, bank, shop, get a loan, or even leave your home could be vastly restricted.

We can see how such a system could work by looking at the Chinese social credit system¹⁰ where behavior is electronically monitored to assess “trustworthiness” in real-time. Aside from failing to pay taxes on time, score-lowering actions can include such minutia as cheating in an online video game, jaywalking, not visiting your parents on a frequent enough basis, smoking in a nonsmoking zone, or walking your dog without a leash.

Momentary thoughtlessness can also land you on any one of hundreds of blacklists controlled by a variety of state agencies with their own jurisdictions, and if you end up on one, you’re typically subject to blacklisting across all of them, at which point you won’t be allowed to do much of anything except work to improve your score. On average, it takes two to five years to get off a blacklist, and that’s assuming you comply with all the recommendations put forth.¹¹

While the Chinese social credit score is still in its infancy, eventually, the plan is to use it to “search for signs of potentially harmful behavior before it occurs”¹² – in other words, a real-world pre-crime type of situation as illustrated in the movie “Minority Report.” This is what vaccine passports can lead to, and there’s every reason to believe that is the plan.

As noted by Naomi Wolf, a former adviser to the Clinton administration, in an interview with Fox News’ Steve Hilton:^{13,14}

“I’m [the] CEO of a tech company, I understand what these platforms can do. It is not about the vaccine, it’s not about the virus, it’s about your data ... What people have to

understand is that any other functionality can be loaded onto that platform with no problem at all. It can be merged with your Paypal account, with your digital currency.

Microsoft is already talking about merging it with payment plans. Your network can be sucked up. It geolocates you everywhere you go. Your credit history can be included. All of your medical and health history can be included ...

It is absolutely so much more than a vaccine pass ... I cannot stress enough that it has the power to turn off your life, or to turn on your life, to let you engage in society or be marginalized."

It's All Been Building to This Point

Indeed, recreating China's social credit system here in the U.S. is likely easier at this point than anyone would like to think, and probably wouldn't take long to implement. Silicon Valley titan Oracle nabbed the contract to be the U.S. Centers for Disease Control and Prevention's central data repository for all COVID-19 vaccine data in the U.S. early on in the pandemic.

Oracle also manages the database for COVID-19 cases and the National Institute for Allergies and Infectious Diseases (NIAID) database for clinical research into COVID-19 vaccines and drugs, a program overseen by Dr. Anthony Fauci.

Now consider this: Oracle has for many years also managed the U.S. national security database, as well as databases for the CIA, Navy Intelligence, Air Force Intelligence, and the National Security Agency, plus banking, and a host of commercial databases. As reported by The Defender:¹⁵

“The information about your banks, your checking balances, your saving balance is stored in an Oracle database,’ Ellison was quoted in the 2004 book, ‘The Naked Crowd.’ ‘Your airline reservation is stored in an Oracle database. What books you bought on Amazon is stored in an Oracle database. Your profile on Yahoo! is stored in an Oracle database.’”

And, as Ellison admitted in 2002, thousands of databases can easily be integrated into a single national file – something he offered to do for free for the U.S. government all the way back then.

The Defender also recounts an old Defense Advanced Research Projects Agency (DARPA) program called Total Information Awareness (TIA), which sought to collect the medical records, drug prescriptions, DNA, financial information, travel data, and media consumption habits of all Americans.¹⁶

The justification for this vast data collection, according to DARPA, was that “the whole population needed surveillance to prevent not only future terrorist attacks but bioterrorism and even naturally occurring disease outbreaks.” The program was defunded in 2003 after intense public backlash, “but TIA never really went away,” The Defender writes.¹⁷ “Various of its programs ended up divvied into a web of military and intelligence programs.”

Here are a few more connections to consider when trying to decide whether a social credit system is really in the works, and why a vaccine passport could serve a central function.

Oracle Labs, the research arm of Oracle, is partnered with DARPA to create an “optically interconnected supercomputer” – something that would come in handy if putting together a massive social credit system that demands interconnectivity between thousands of databases.

DARPA is also working on advanced pandemic surveillance and biological threat detection.¹⁸ In fact, it has an entire division specializing in biological technologies – the Biological Technologies Office (BTO) – which developed hydrogel, an implantable type of nanotechnology that transmits light-based digital signals through wireless networks.¹⁹

It's basically a gel-like biosensor that can both record and share biological data. The hydrogel is manufactured by Profusa, which is partnered with the Bill & Melinda Gates Foundation²⁰ and backed by Google, the largest data mining company in the world.

In 2020, there were rumors that this hydrogel would be part of Moderna's mRNA delivery system.²¹ DARPA, by the way, actually funded Moderna too.²² However, it is unclear whether hydrogel actually ended up being used in Moderna's or any other COVID-19 vaccine. At any rate, it could be used, if not now, then in the future.

Now, ask yourself, considering all of these various data points that I've covered – which by no means includes everything – just how likely is it that a national social credit system based on digital surveillance, including medical and biological surveillance, is NOT in the works?

Vaccine Passports Spell the End of Freedom

I recently [interviewed Wolf](#) about her book "The End of America." The book, published in 2007, was a prescient warning about the very time we now find ourselves in. In it, she laid out the 10 steps toward tyranny that have been followed by virtually every modern-day would-be tyrant.

"They all took the same 10 steps, and they always work. I

warned people that when you start to see these 10 steps, you have to take action, because there is no way to recover once things go too far without a bloody revolution or a civil war. We are [now] at Step 10 ... and once Step 10 locks in, there is no going back," Wolf says.

The 10 steps toward tyranny start with the invocation of a terrifying internal and/or external threat. It may be a real threat or an imagined one, but in all cases, it's a hyped-up threat. From 2001 onward, that threat was terrorism, which was used as the justification for stripping us of our liberties.

The last and final step in the implementation of tyranny, Step 10, involves the creation of a surveillance state where citizens are under constant surveillance and critique of the government is reclassified as dissent and subversive activity. Vaccine passports are clearly an integral part of that surveillance apparatus and a precursor to a social credit system.

There simply can be no doubt of that, and if we don't put a stop to it now, we'll be locked into not just a national dictatorship but a global one, run by unelected, largely unknown individuals and Big Tech oligarchs. There will be no one to help anyone else because all nations will be in the same boat.

Peaceful Protest and Legislative Action Are the Remedies

To avoid the fate that comes next, everyone everywhere needs to recognize the danger and take action. Such action includes peaceful protest and civil disobedience – simply not complying with [mask mandates](#), [social distancing](#), [lockdowns](#), vaccination, or anything else.

We must also fight through legislation. As mentioned earlier,

14 U.S. states have already passed laws banning requirements for vaccine passports, which protects the freedoms of everyone within those states. While that's a good start, there are dozens more to go, and other countries need to enact such laws as well. As noted by Wolf in my interview with her:

"Once [vaccine passports] are launched ... people like you and I, Dr. Mercola, will be switched off of society. 'Oops, my vaccine passport is positive. I guess I can't go food shopping for my family.' 'I said something critical of biofascism on Dr. Mercola's show, so now my child can't get into school.'

Just as in Israel, where people who are critics are being surveilled [and] marginalized from society, it has turned into a two-tier society. If you choose not to get vaccinated, then you're really in a marginalized minority in an apartheid state.

The more we know about these vaccines, the scarier it is to have coercion that is social. It's also illegal. In America, we have the Americans with Disabilities Act. It means it's illegal to even ask me anything about my medical status. You can't ask me if I'm pregnant. You can't ask me if I'm disabled. You can't ask me if I have diabetes or HIV. You cannot ask me anything. By definition, these intrusive measures are unlawful.

We have to use the law to save the law, basically ... We have to fight before we are living in fascist regime where every move is tracked and we're marginalized from society."
