

# **In Possible Major Breakthrough, Researchers Develop Drug That Completely Neutralizes COVID**

There is a possible major breakthrough in the battle against COVID-19. Researchers in Pittsburgh have developed a drug that completely neutralizes the coronavirus. The potential drug is called AB-8, a small piece of the anti-COVID antibodies that have been used to treat COVID patients by blocking or neutralizing the coronavirus. But this very small molecule appears to have major advantages over other drugs, and perhaps even vaccines.
