

The COVID Vaccine: Simple Facts Staring Us in the Face

By Jon Rappoport | [No More Fake News](#)

I've written much about the extreme dangers of a COVID vaccine. Here I want to present simple basic facts, which apply to all vaccines and all recipients.

Public health agencies readily admit that people with weakened immune systems should not be vaccinated.

But the language they use is dodgy and incomplete. The CDC states: "A vaccine should not be administered when a contraindication is present; for example, MMR vaccine should not be administered to severely immunocompromised persons...Severely immunocompromised persons generally should not receive live vaccines..."

No word about killed-virus vaccines. No word about the dangers of vaccine components, such as aluminum and formaldehyde.

But there are more issues. According to conventional vaccine theory, the injection of a germ stimulates the immune system to mount a response—and this is an effective rehearsal, preparing the immune system to react quickly, later, when the real disease comes along.

But if the recipient of the vaccine has an immune system that is already impaired, how can the “experts” believe the rehearsal will go smoothly? The recipient’s antibody scouts would respond sluggishly. The immune killer cells would fail to carry out their mission of wiping out the germ-invaders in the vaccine.

To use a mechanical analogy, vaccinating people with compromised immune systems is like pumping more efficient fuel into a car to improve its performance, when in fact the car’s engine is already disabled.

Worse yet, vaccinating a person whose immune system is weak would overwhelm his body’s defenses with injected chemicals and germs, creating dire levels of illness. The rehearsal would be the real thing—and the body would take the punishment.

All right. Now imagine the completion of [COVID-19 vaccine development](#) and a few billion people receiving a new COVID vaccine. Do you seriously think doctors are going to spend time sorting out all these people, to discover whose immune systems are already weak, and shunting them off into the do-not-vaccinate category? Of course they won’t.

No mass vaccination campaign (for example, in Africa) has separated the weak from the strong—and none of those campaigns approached the numbers envisioned for the COVID vaccine.

In a COVID campaign, people are going to be dropping like

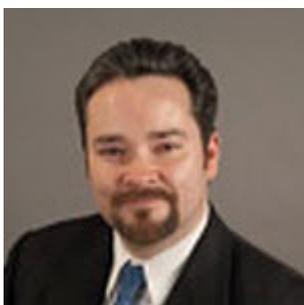

flies. And when they do, public health authorities will employ the time-honored strategy of calling them “sudden deaths owing to COVID disease.”

Furthermore, I’m talking about a conventional vaccine. Two new technologies are in the COVID testing pipeline as we speak: DNA and RNA vaccines. They have never been released for public use. DNA technology is actually gene therapy. Genes are injected into the body, and they permanently alter the genetic makeup of the recipient in unknown ways. RNA vaccines would carry the danger of triggering autoimmune reactions, meaning the body basically goes to war against itself.

Pro-vaccine religionists are enthusiastic and militant about bringing a COVID vaccine into play, and they want to see it mandated. In their wet dream, a vaccinated person would receive an immunity certificate, enabling him to go back out into the world, from lockdown. The unvaccinated would face a more murky future.

In this sense, the entire “COVID pandemic” is an operation designed for the use of a vaccine. Politically, it is offered up as a forked road into favored status, or a shameful lower-class outlier category, resembling Church excommunication.
